Hiring Committee
Galaxy

Dear Hiring Team,

I am excited to apply for the **Data Engineer position at Galaxy in New York**. With a strong background in building scalable data pipelines, cloud-native infrastructure, and predictive analytics, I am eager to contribute to Galaxy's mission of driving innovation at the intersection of finance, AI, and digital assets.

As an **Analytics Data Engineer at iTalent Tech**, I design and maintain Snowflake-based data solutions, enabling faster analytics and efficient data delivery. My work with **Snowpark, Python, and automation workflows** has streamlined enterprise data processes and improved query performance. Before that, as a **Data Engineer at Clemson University**, I developed Spark pipelines to preprocess over 1.2M+ records, cutting ingestion time by 65% and enhancing forecasting models using TensorFlow and Scikit-learn. I also engineered **streaming systems and anomaly detection** frameworks, reducing downtime by 30%.

My experience includes:

- Building **real-time pipelines** using Kafka, Spark, SQL, and Airflow.
- Developing and deploying **ML models** for time-series and forecasting problems.
- Managing infrastructure with **AWS, Kubernetes, and CI/CD pipelines**.
- Creating **end-to-end solutions**, from ingestion and transformation to analytics and visualization.

I am particularly drawn to Galaxy's focus on **high-performance computing and Web3 innovation**. I am confident my skills in **big data processing, cloud systems, and data engineering frameworks** align well with your needs.

I welcome the opportunity to bring my data engineering expertise and enthusiasm for crypto and AI to your team. Thank you for considering my application. I look forward to the possibility of contributing to Galaxy's data backbone.

Best regards,
Madhav Ashok
